

Collaboration

EMAP Consulting can host webmaps for collaboration purposes.

Data and maps can be shared with your clients, customers and stakeholders for them to provide comments on the map.

EMAP Consulting can store the data that is collected over the period of time that you wish, and download and send to you in a GIS and/or Excel spreadsheet format.

In this example, Council staff provided input to a NSW Government vegetation condition review project. The data was valuable to the project in providing data about the condition of various vegetation patches.

Project Overview

Client: Department of Planning

Project: ENV REview

Timeframe: November 2017

Service: Collaboration Webmaps

Software: ArcGIS Online
